Polycarbonat

Polycarbonat PC

Polycasa PC is the virtually unbreakable polycarbonate sheet.

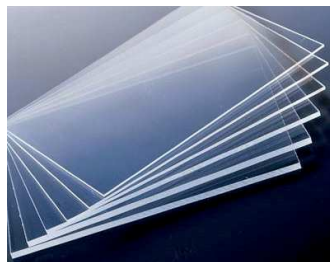

Its excellent optical and weathering properties make it the material of choice for safety and balcony glazing, machine guards, windows and canopy roofs.

And with excellent mechanical, thermal and electrical properties, not to mention a range of special features and patterns, you can use Polycasa PC almost anywhere — ideal for the construction and glazing industries.

Polycarbonat SPC

- Polycasa SPC is a range of extruded, structured, polycarbonate sheets that offer the clarity of glass but are stronger and more resistant to impact. In fact, they are virtually unbreakable.

Polycasa SPC is light, strong, weatherproof, and insulates against heat and cold. Not only that, but it has a long working life and carries a 10 year warranty against yellowing.

So, it's no wonder it's seen as an attractive sheet for use as roofing, cladding and glazing in construction, agriculture, industry and DIY.
